# **Tasks API Documentation**

This document describes the endpoints, request/response formats, and error handling for the Tasks API in the sample Task Manager application.

## **Base URL**

/tasks

# **Endpoints**

### 1. Create a Task

• POST /tasks

```
• Description: Create a new task.
• Request Body:

{
    "title": "string",
     "description": "string",
     "priority": "Low|Medium|High"
}

• Response:
     • 201 Created
     • Body:

     {
          "id": "string",
          "title": "string",
          "description": "string",
          "dueDate": "2025-10-31T23:59:59Z",
          "priority": "Low|Medium|High",
```

```
"status": "Pending|Completed"
}
```

## 2. Get a Task by ID

- **GET** /tasks/{id}
- **Description:** Retrieve details for a specific task.
- · Response:
  - ° 200 OK
  - Body: Same as above
  - 404 Not Found if task does not exist

#### 3. List All Tasks

- GET /tasks
- **Description:** Retrieve all tasks (optionally filter by status, priority, or due date).
- Query Parameters:
  - status (optional): Pending | Completed
  - o priority (optional): Low|Medium|High
- Response:
  - ∘ 200 OK
  - Body:

### 4. Update a Task

- PUT /tasks/{id}
- **Description:** Update details of an existing task.
- Request Body: Same as Create
- Response:
  - 200 OK with updated task
  - 404 Not Found if task does not exist

#### 5. Delete a Task

- **DELETE** /tasks/{id}
- **Description:** Delete a task by ID.
- Response:
  - 204 No Content on success
  - 404 Not Found if task does not exist

# **Error Handling**

- All errors use **ProblemDetails** format for consistency.
- Example error response:

```
{
  "type": "https://example.com/probs/task-not-found",
  "title": "Task Not Found",
  "status": 404,
  "detail": "No task found with the specified ID.",
  "instance": "/tasks/123"
}
```
